

# MonoTrap™

**Monolithic Material Sorptive Extraction**

**A State-of-Art media for the  
Extraction & Enrichment**

Based on monolithic technology,  
Merck KGaA, Darmstadt, Germany

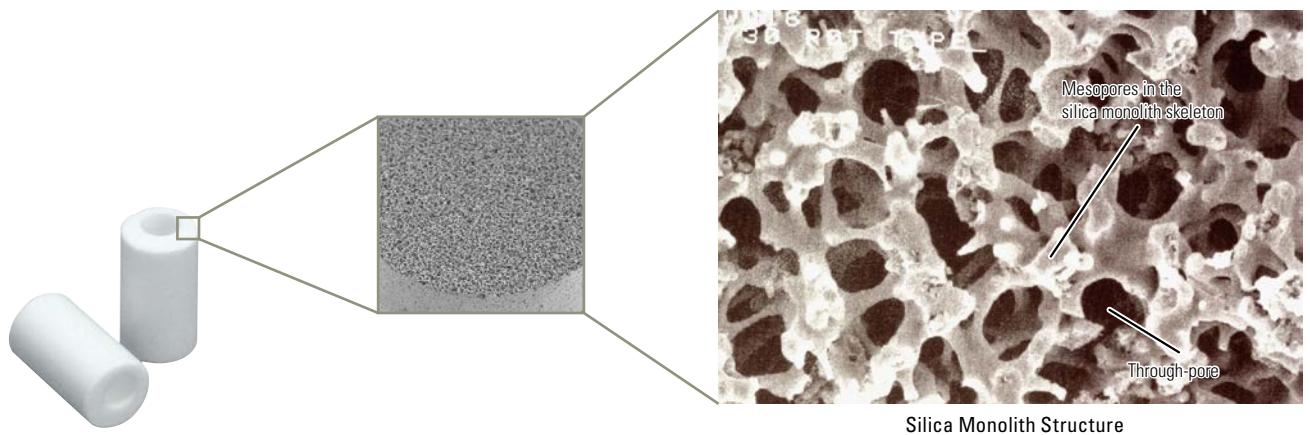

**GL Sciences Inc.**

# The Ultimate Technology for Sample Concentration

MonoTrap is a newly-developed, state-of-the-art sorptive media, based on the high surface area of silica monolith technology. It's designed for simple and rapid enrichment of flavors, aromas, and fragrances, and can be easily used for the analysis of volatile and semi-volatile compounds for quality control, environmental, and forensic applications.

## Silica Monolith Structure

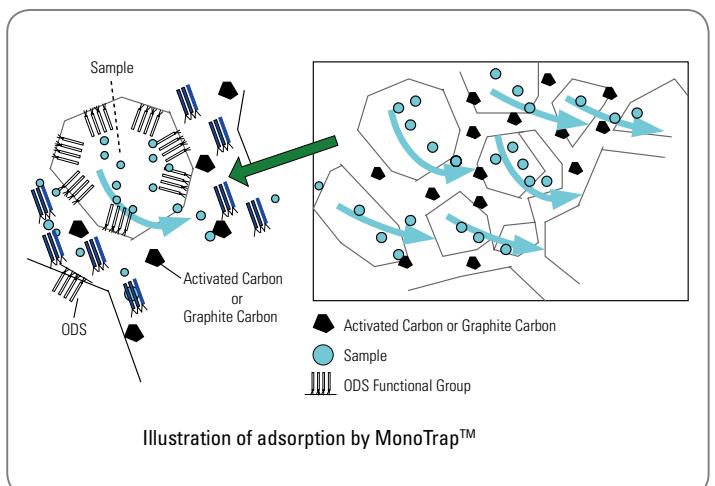

The large surface area provided by the three dimensional silica monolith's network of through pores and mesopores offers unmatched adsorption and desorption efficiency.

### Outline of adsorption

Samples are adsorbed on the surface of silica monolith structure either comically modified or embedded with active carbon or graphite carbon.

Through Pores and Meso Pores provide over  $150\text{m}^2/\text{g}$  surface area, therefore small hybrid adsorbent MonoTrap perform high adsorption and desorption.

## Features

### ■ Easy-to-use

MonoTrap performs a very low blank, it can be used directly without any conditioning.

### ■ Highly Efficient Adsorption

MonoTrap's large surface area offers larger sample loading capacity, ensuring a higher concentration of adsorbed compounds.

### ■ Complete Desorption with low Solvent Volume

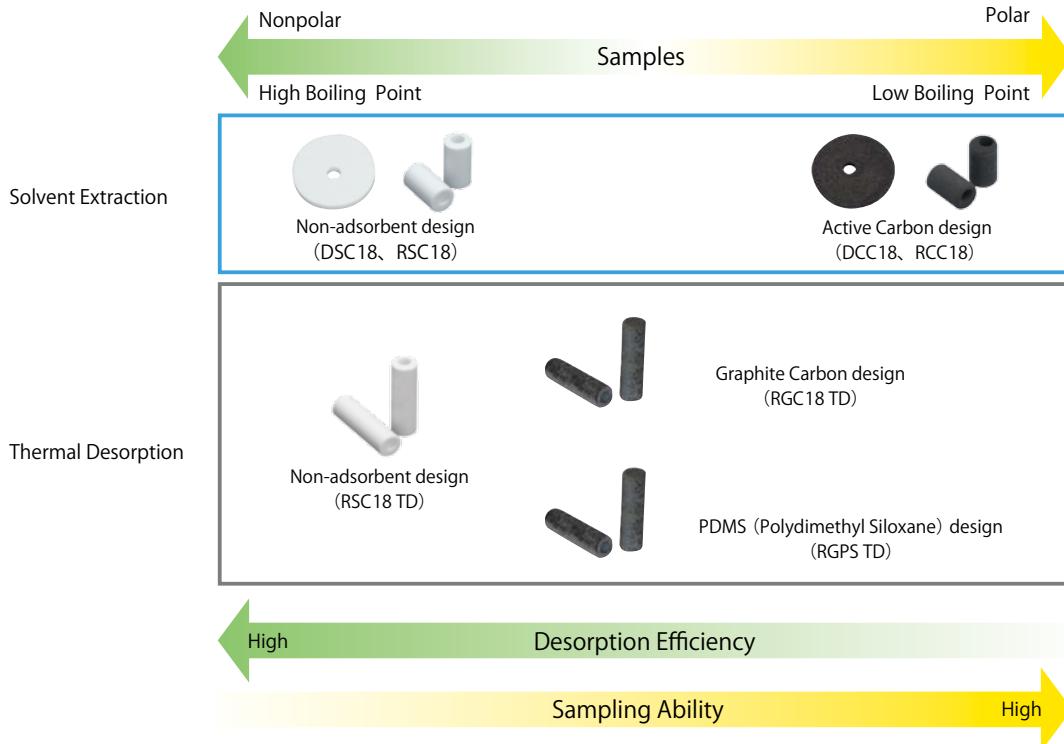

It only takes a small amount of solvent, 200 µL, to completely saturate the monolithic network and achieve desorption, though more solvent can be used to control the final concentration of your samples.

### ■ Hydrophobic Surface

MonoTrap's monolithic network is functionalized using hydrophobic ODS groups, therefore, MonoTrap will not adsorb water from aqueous samples. No need to worry about injecting water onto your GC or GC/MS when using MonoTrap as with liquid-liquid extraction or other sorptive media. This also allows for the addition of ionic salts to improve sample adsorption with MonoTrap.

### ■ Multiple Injections & Analyses

Because compounds adsorbed to MonoTrap can be extracted using 200 µL (or more) of organic solvent, it is no problem to perform multiple injections of your sample. With MonoTrap, it is even possible to make injections on different GC systems utilizing different column phases! Solvent extraction can even be accomplished within a GC autosampler vial using the rod shaped MonoTrap.

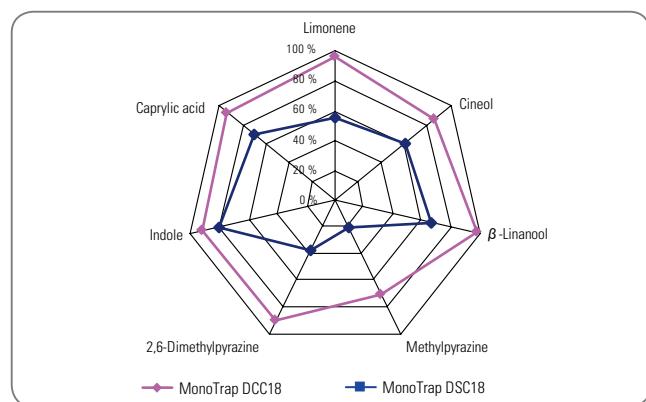

### Superior Enrichment Capabilities using Activated Carbon/Graphite Carbon in addition to ODS

The graph on the right shows a comparison between the recovery rate of DCC18 (containing activated carbon) and DSC18 (containing only ODS groups). For a relatively non-polar compound such as Indole, both the MonoTrap DCC18 and DSC18 have approximately the same enrichment capabilities.

With more polar compounds, such as Methylpyrazine, the activated carbon groups on the MonoTrap DCC18 do a much better job of enrichment than the MonoTrap DSC18, which contains only hydrophobic ODS groups.

Recoveries were calculated using dichloromethane as the extraction solvent.

# How to use MonoTrap™

## Head Space Gas Sampling

MT Holder & MT Stand  
Grasp the MonoTrap with tweezers  
and insert the holder into the hole on the MonoTrap.

Hold MT Holder with pliers whose ends have been cleaned and pass it through the septum. Put a cap on top of the holder.

Clean Pin Hole Septum with Vial  
(40 mL)

Tighten the septum on the vial.

## Stirring Sampling

Use an agitation bath for heating and stirring.  
For screening without heating, use the handless shaker  
(Cat.No. 8500 - 50000)  
and special holder  
(Cat.No. 8500 - 50001)  
※ We recommend EYELA NTS- 4000 B series for  
agitation bath.  
Please contact our local dealer for more  
details of the agitation bath and vial rack.

Put the sample into the vial and float MonoTrap

Handsfree shaker and the holder

## Passive Sampling

※ Please contact our local dealer for the Tedlar bags

## Solvent Extraction

### Extraction from the Disk Type

Fill the MT Extract  
Cup with the  
extraction  
solvent

Put the MonoTrap and  
tighten the  
septum

Pour pure water into  
the vials

### Extraction from the Rod Type

## Thermal Desorption

Gerstel, T-Dex and Linex glass tubes are available

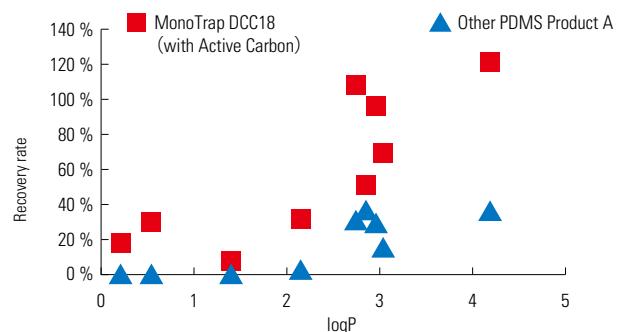

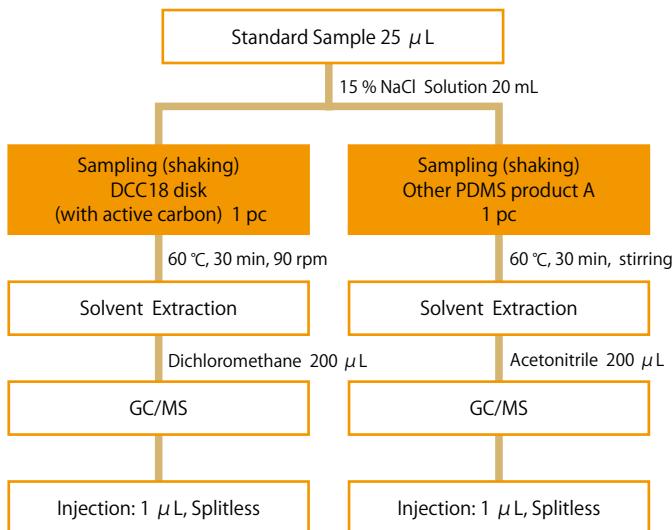

## ● MonoTrap performs high recovery

MonoTrap DCC18 shows high recovery rates for low to high logP compounds and hydrophilic to hydrophobic compounds. Unlike other products for which usable extraction solvents are limited to methanol and acetonitrile, dichloromethane with higher solvent extraction power can be used for MonoTrap.

To obtain a high recovery MonoTrap is an easy-to-use media to select the types of extraction solvents.

Standard samples : Limonene, Cineol,  $\beta$ -Linalool, Methylpyrazine, 2,6-dimethylpyrazine, Indole, Camphor, Octanoic acid, Coumarin, 2'-acetonaphthone.

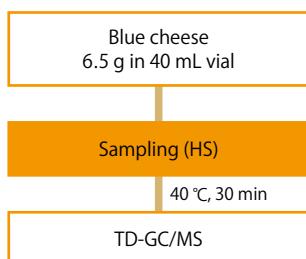

200  $\mu$ g/mL of each in Methanol.

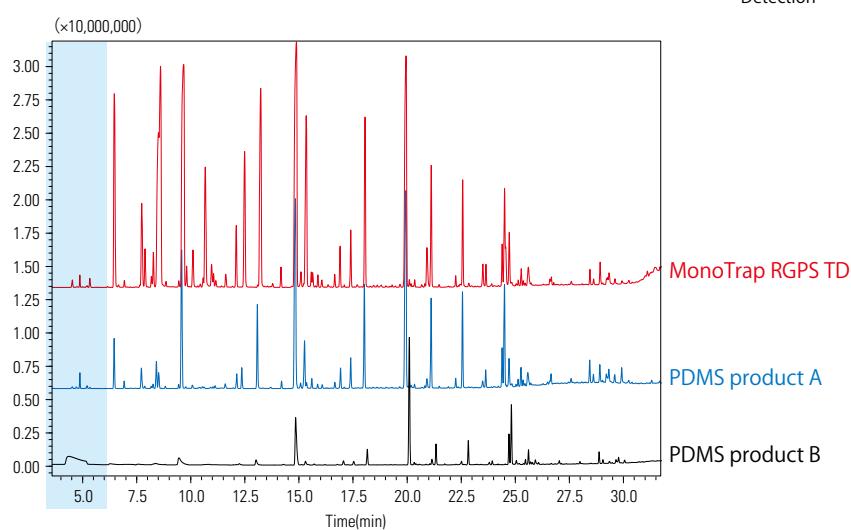

Recovery rate comparison between  
MonoTrap DCC18 and other PDMS product A

Component	logP	MonoTrap DCC 18 (with Active Carbon)	Other PDMS Product A
Methylpyrazine	0.21	18.8 %	0.6 %
2,6-Dimethylpyrazine	0.54	30.7 %	1.8 %
Indole	2.14	32.0 %	3.5 %
Cineol	2.74	107.0 %	30.5 %
Linalool	2.97	97.0 %	29.8 %

## ● MonoTrap performs high recovery

Comparison of different sampling tools on the flavor of blue cheese analysis.

Here is an example of blue cheese, after sampling fragrance of blue cheese with MonoTrap RGPS TD, analysis was performed with Thermal Desorption system.

System : GC/MS-Thermal Desorption (T-Dex II)  
Column : InertCap Pure-WAX  
          : 0.32 mm I.D.  $\times$  60 m df = 0.50  $\mu$ m  
Col.Temp. : 40 °C (3 min hold) - 6 °C/min - 250 °C (30 min hold)  
Carrier Gas : He 1 mL/min (constant flow)  
  
Desorb Temp. : 250 °C  
Time : 5 min  
Flow : 7 mL/min  
Split : Splitless  
Cryo Trapping : -150 °C  
Injection Temp. : 250 °C  
Detection : MS Scan (28.5 - 600 m/z)

## MonoTrap's Nomenclature & Character

Ex) MonoTrap 

① Shape --- D : disk type, R : rod type

② Adsorbent --- C : Chemical bonded with active carbon, G : Chemical bonded with graphite carbon, S : without adsorbent

③ Function group/stationary phase --- C18 : octadecyl C18, end-capped

PS : coded with PDMS (Polydimethyl Siloxane), end-capped

④ Desorption --- TD : for thermal desorption

- 25. 2-Furanmethanol
- 26. Acetamide
- 27. 2-Tetradecanol
- 28. 2-Tridecanone
- 29. Hexanoic acid
- 30. Dimethyl sulfone
- 31. δ -Octalactone
- 32. 2-Pentadecanone
- 33. Octanoic acid
- 34. δ -Decalactone
- 35. Decanoic acid

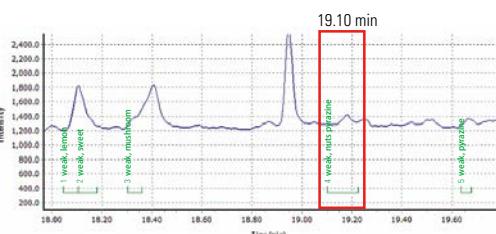

## Maple Sugar

System : GC/MS-Thermal Desorption (T-Dex II)  
 Column : InertCap Pure-WAX  
 0.25 mm I.D. × 60 m df = 0.25 $\mu$ m  
 Col.Temp. : 40 °C (5 min hold) - 6 °C /min - 250 °C  
 Carrier Gas : He 1 mL/min (constant flow)

Desorb Temp. : 200 °C  
 Time : 5 min  
 Flow : 1 mL/min  
 Split : Split 1:2 (Desorb 10 mL/min, Split 20 mL/min)  
 Cryo Trapping : -150 °C  
 Injection Temp. : 250 °C  
 Detection : MS Scan (28.8 - 600 m/z)

### Screen of Olfactory Voicegram Software

No.	Start (min)	End (min)	Intensity	Smell
1	18.05	18.11	weak	lemon
2	18.11	18.18	weak	sweet
3	18.30	18.36	weak	mushroom
4	19.10	19.23	weak	nuts pyrazine
5	19.64	19.68	weak	pyrazine

<http://www.glsciences.com/>

The screenshot shows the GL Sciences homepage. At the top, there's a navigation bar with links for Products, Technical Support, Events, About GL Sciences, Distributors, and Contact Us. A search bar is located at the top right. Below the navigation is a large banner featuring a variety of fruits and vegetables, with the text "Sample preparation products" and "InertSep Series" and "MonoSpin Series". A "And more" button is visible in the bottom right corner of the banner. Below the banner, there are sections for "What's New" (listing news items from Jan 6, 2014, Dec 26, 2013, and Dec 24, 2013), "Products" (with categories like Sample Preparation, HPLC, GC, Others, and sub-sections for Solid Phase Extraction, Flavor and Smell, and Protein Precipitation), and "Technical Support" (with links for InertSearch LC/GC Applications, LC Technical Note, and GC Technical Note). A "Distributors" section is also present.

<http://www.glsciences.com/tech/>

The screenshot shows the GL Sciences technical support page. The navigation bar includes links for Products, Technical Support (which is highlighted in red), Events, About GL Sciences, Distributors, and Contact Us. A breadcrumb trail indicates the user is at Home > Technical Support. On the left, there's a sidebar with a "Technical Support" menu containing links for InertSearch, LC Technical Note, and GC Technical Note. The main content area has a "Technical Support" header and a "InertSearch" section. It describes InertSearch as an onsite search engine for chromatographic data and explains how users can find chromatograms by entering keywords. Below this is a "Technical Note" section, which defines it as a database of chromatographic results and useful information, providing detailed explanations of analyses. A "Distributors" section and an "About GL Sciences" link are also visible.
